MSE 2090: Introduction to Materials Science Chapter 8, Failure 10 Stress Concentration where σ_0 is the applied external stress, a is the half-length of the crack, and r the radius of curvature of the crack tip. (note that a is half-length of the internal flaw, but the full length for a surface flaw).

Definition. In mechanics of materials, the strength of a material is its ability to withstand an applied load without failure or plastic deformation. The field of strength of materials deals with forces and deformations that result from their acting on a material.

Fatigue life. The American Society for Testing and Materials defines fatigue life, N_f , as the number of stress cycles of a specified character that a specimen sustains before failure of a specified nature occurs. For some materials, notably steel and titanium, there is a theoretical value for stress amplitude below which the material will not fail for any number of cycles, called a fatigue ...
