Storm water drains are designed to carry the maximum storm runoff that is likely to be produced by the contributing catchment area from a rain of design frequency and of duration equal to the time of concentration.

roadside ditch flow, structure design, and storm drain piping. Procedures for the design of detention facilities are also presented, along with an overview of storm water pumping stations and urban water quality practices. This edition presents a major change in the methodology discussed in Chapter 5 for designing channels and in Chapter 7 for calculating energy losses in storm drain access holes. 17. Key Words 18.

Hydraulic Design of Storm Sewers with Excel Dr. Harlan H. Bengtson, P.E. COURSE CONTENT 1. Introduction Storm sewers are widely used to carry away runoff from storms, primarily in urban areas. The hydraulic design begins after the location of the manholes for the system has been determined. Between each pair of manholes the storm sewer will
