In a microwave beam directed at an angle into the sky, a small amount of the power will be randomly scattered as the beam passes through the troposphere. A sensitive receiver beyond the horizon with a high gain antenna focused on that area of the troposphere can pick up the signal.

A microwave oven (also commonly referred to as a microwave) is an electric oven that heats and cooks food by exposing it to electromagnetic radiation in the microwave frequency range. This induces polar molecules in the food to rotate and produce thermal energy in a process known as dielectric heating. Microwave ovens heat foods quickly and efficiently because excitation is fairly uniform in ...

12 ¶ If multiple signal sources of the same frequency are present, or multiple paths exist between a radar and target, then the total signal at a location is the sum (superposition principle). ¶ The result is interference: constructive interference occurs if the waves

David K Barton is one of the United States' most experienced and accomplished innovators in radar design and engineering, and has authored many important radar theory texts. In 1994 the Microwave Journal published his technical report covering a range of Russian radar designs, based largely on interviews with the original lead designers and architects of these systems.
