transportation flow through a semiconductor switch that is used to convert one form of electricity into another form. This solid-state energy conversion is widely referred to as – power electronics. – Power electronics constitutes the backbone of electricity transmission, distribution, and processing much like signal electronics is used for

Switching Megawatts with Power Transistors

Power semiconductor devices constitute the heart of modern power electronic apparatus. They are used in power electronic converters in the form of a matrix of on-off switches, and help to convert power from ac-to-dc (rectifier), dc-to-dc (chopper), dc-to-ac (inverter), and ac-to-ac at
