Robotics is an interdisciplinary branch of engineering and science that includes mechanical engineering, electronic engineering, information engineering, computer science, and others. Robotics deals with the design, construction, operation, and use of robots, as well as computer systems for their control, sensory feedback, and information processing. ...

Cognition. Intelligence as a concept in any system means treating knowledge, attention and memory as mental actions. Cognition enables learning, decision making, problem solving, reasoning and evaluation: in robotics this means offering adaptive and flexible control behavior in conjunction with data-efficient few-shot learning. Recent advancements in this area allow for behavior tracking as ...

An industrial robot is a robot system used for manufacturing. Industrial robots are automated, programmable and capable of movement on three or more axes. Typical applications of robots include welding, painting, assembly, pick and place for printed circuit boards, packaging and labeling, palletizing, product inspection, and testing; all accomplished with high endurance, speed, and precision.

I share a commonly-held vision for the Internet of Things wherein mobile devices (such as robots) interact with smart objects -- objects with embedded microelectronics that perform computation, sensing, communication, energy harvesting, and energy storage.

3.1. Inception in the 1970s. A detailed survey of related research in the 1970s was performed by Harmon , , . Although these surveys covered 160 papers, a careful review of the references reveal that most of the papers addressed other sub-areas of robotics rather than directly contributing to tactile sensor technology . For example, it was realized that if robotic grippers could handle soft ...

REAL WORLD CONTROL RobotBASIC can perform serial and parallel I/O operations to all PC Ports (both real and virtual), including USB or Bluetooth. It even has direct support for USBmicro I/O boards (see USBmicro.com for complete information on their products and the PDF below for many example applications). You can choose to create your own protocols or just use ours, which allows the ...

To secure uninterrupted distribution of electricity, effective monitoring and maintenance of power lines are needed. This literature review article aims to give a wide overview of the possibilities provided by modern remote sensing sensors in power line corridor surveys and to discuss the potential and limitations of different approaches.

Technical Focus. The principal emphasis of the workshop is on the integration of vision and artificial intelligence from the viewpoints of embodied perception, interaction, and autonomous control.

With regards to academic ruminations about deep learning, in 2017 there was a new cottage industry in attacking deep learning by constructing fake images for which a deep learning network gave high scores for ridiculous interpretations.
