What is self-injury? Nonsuicidal self-injury (NSSI) is the deliberate, self-inflicted destruction of body tissue resulting in immediate damage, without suicidal intent and for purposes not culturally sanctioned. Self-injury can include a variety of behaviors but is most commonly associated with: intentional carving or cutting of the skin

About Self-Injury and Recovery

ABSTRACT This article is a review of the literature on classroom formative assessment. Several studies show firm evidence that innovations designed to strengthen the frequent feedback that students receive about their learning yield substantial learning gains. The perceptions of students and their role in self-assessment are considered alongside analysis of the strategies used by teachers ...

Introduction. The assessment of functioning wounds is an extremely important aspect of care. It should involve a holistic approach and include information on the patient's psychological and social state as well as local wound factors , , . Collier suggests that this may be achieved using a nursing model and recommends Roper, Logan and Tierney's 'Activities of Daily Living'.

Self-harm is not typically suicidal behaviour, although there is the possibility that a self-inflicted injury may result in life-threatening damage. Although the person may not recognise the connection, self-harm often becomes a response to profound and overwhelming emotional pain that cannot be resolved in a more functional way.

Breast self-examination (BSE) is a screening method used in an attempt to detect early breast cancer. The method involves the woman herself looking at and feeling each breast for possible lumps, distortions or swelling. BSE was once promoted heavily as a means of finding cancer at a more curable stage, but large randomized controlled studies found that it was not effective in preventing death ...
