

## **social network based recommender pdf**

Social network analysis (SNA) is the process of investigating social structures through the use of networks and graph theory. It characterizes networked structures in terms of nodes (individual actors, people, or things within the network) and the ties, edges, or links (relationships or interactions) that connect them. Examples of social structures commonly visualized through social network ...

Properties of the learned task representation. As hinted earlier, in adopting the FiLM perspective we implicitly introduce a notion of task representation: each task "be it a question about an image or a painting style to imitate" elicits a different set of FiLM parameters via the FiLM generator which can be understood as its representation in terms of how to modulate the FiLM-ed network.
